

US Disaster Declarations Dashboard

Dashboard Overview

The dashboard provides interactive analysis of FEMA disaster declaration data across the United States. Users can monitor disaster trends, geographical distribution, disaster duration, incident categories, and FEMA assistance programs while performing scenario analysis using a What-If parameter.

Data Source

1. Ensure the CSV source files remain in the same folder location.
2. Open the Power BI (.pbix) file.
3. Click on Transform data → Connect the source (File name: us_disaster_declarations.csv) to all the Facts and Dimensions tables.
4. Select Close and Apply.
5. Go to Home → Select Refresh.
6. Verify if the KPI cards, charts, and maps are refreshed successfully.

Troubleshooting

In case, on the Geographical Analysis page, the map shows an error, follow the steps below:

1. Go to File in the top left corner.
2. Select Options and settings, then click Options.
3. Look under the Global menu and click on Security.
4. Check the box next to "Use map and filled map visuals".
5. Click OK, save your work, and restart Power BI Desktop to apply the changes.

Dashboard Navigation

1. Overview – Executive KPIs and summary.
2. Geographic Analysis – Interactive state map.
3. Temporal Trends – Yearly and monthly disaster patterns.
4. Program Insights – Incident type and FEMA assistance analysis.
5. Scenario Insights – What-If simulation dashboard.

What-If Parameter

Use the Frequency Adjustment (%) slider to simulate increases or decreases in disaster frequency (0%-50%). Observe how projected KPIs and scenario visuals change instantly. Return the slider to 20% to go back to the default view.

Best Practices

1. Use slicers and filters to focus on specific states or years.
2. Hover over charts for detailed tooltips.
3. Click on charts and tables to enable the interactive dashboard.
4. Reset filters before presenting results.
